

## **Individual reflection week 4 - Hampus Ekberg**

### **What do I want to learn or understand better?**

Like last week I still need to research how to update a user when their ad has been claimed in an efficient manner. I also want to understand better how to formalize the process of completing tasks so that we have a set process that ensures quality.

I would like to better understand how pull requests work. Instead of just merging locally and pushing we will start working with pull requests in the next sprint.

### **How can I help someone else, or the entire team, to learn something new?**

Same as last week

### **What is my contribution towards the team's use of Scrum?**

I have contributed to the team's use of Scrum by completing my claimed tasks and being active during the sprints startup meeting, and contributing feedback to our work process.

### **What is my contribution towards the team's deliveries**

This week I have not done that much, because of other commitments and because the user story I was given was a lot smaller than we anticipated. My contribution this week was simply making it so you can swipe down on the ad list to update it.
