

What do I want to learn or understand better?

A learning objective during the project process is to be aware of what pace I am working in, in relation to the estimated scope. If the goal for a sprint is not within reach, I will need to take appropriate measures, work more, perhaps ask for assistance. To do this, I will need to communicate with the group and assess what the overall current pace in the group is as well as clarify and be sure of what the goal of the sprint is.

How can I help someone else, or the entire team, to learn something new?

If I believe there is concept or technologies which could help the project process, I should bring it up in a discussion with the person or team, discuss whether this something is worth learning or not depending on the time it takes and how much it contributes. In case it is worth learning, I can help them learn by (assuming I have already learned it) illustrating functions of example a technology and how to use them, or simply explaining a concept (could use illustrations here as well).

What is my contribution towards the team's use of Scrum?

My contribution so far (lego scrum) has been to propose ideas of improvement.

What is my contribution towards the team's deliveries?

My contribution towards the deliveries (lego scrum) has been to build the deliveries as well as bring parts for the building.
