

What do I want to learn or understand better?

As this week was a busy schedule for everyone in the team, communication has not seen much improvement yet. For the next objective, I want to learn how to use pull-requests in order to improve code quality. This means sending implemented code to another user to review, which is something we will implement into our work process next sprint. To learn using this, I will read articles and experiment using test projects.

How can I help someone else, or the entire team, to learn something new?

By using test projects and experimenting with pull-requests with another team member, we can simultaneously learn by sending pull-requests to each other.

What is my contribution towards the team's use of Scrum?

Reflecting in the sprint review, working on our application flow for testing.

What is my contribution towards the team's deliveries?

This sprint we decided to implement a way to test and ensure our functionality is without errors. We created a user story for the team, which I decided to take. The delivery this week was a description of the main and exception flow of the applications functionality. By going through these flows, we can see if any newly added implementations are causing errors in old implementations.
