

## **Individual reflection week 1 - Hampus Ekberg**

### **What do I want to learn or understand better?**

So far we have been mostly discussing project ideas and how to best work together in a group. For the project idea, what I would want to learn is the business side of the idea. I am probably decent at figuring out how to execute on the programming side of a project, but I currently have no idea at all on how to set up a good business model.

### **How can I help someone else, or the entire team, to learn something new?**

I like programming, so hopefully when it comes to programming the project I will have valuable viewpoints that I could share with the team. When it comes to coming up with project ideas I think that the more ideas we discuss the better it is, so everyone including me will hopefully be able to contribute in that field.

### **What is my contribution towards the team's use of Scrum?**

This week we have only done the lego exercise as far as Scrum goes. My contribution there was discussing and giving opinions during reflection and of course the actual building. One thing that is perhaps pretty obvious but became very apparent during the exercise was the importance of communication. Communication between teams, communication inside teams, and also communication with product owner.

### **What is my contribution towards the team's deliveries**

Like I said earlier we have only really been discussing project ideas and how to best work together. For both of those I have contributed by being present on meetings and giving opinions on both project ideas and group dynamics.
