

**what do I want to learn or understand better?**

The group has settled on making an android application that will help match people who want to recycle cans with people who have recyclable cans at home. Since I have never made an android application before, that is something I need to learn. To do this we will all need to read up on android APIs and frameworks that will potentially help us develop the application.

**how can I help someone else, or the entire team, to learn something new?**

The programming of the application has not yet started, we are still in the planning phase, meaning we are coming up with user stories and reading up on technology to use. I am not sure if I specifically can contribute something unique, but we can all help each other by sharing what we learn.

**what is my contribution towards the team's use of Scrum?**

Sprints have not yet started, but we have all been thinking of user stories and how to divide them into tasks.

**what is my contribution towards the team's deliveries?**

No deliveries have been made
