Individual reflection week 3.5 - Hampus Ekberg

What do I want to learn or understand better?
Like last week I still need to research how to update a user when their ad has been claimed in an efficient manner. I also want to understand better how to formalize the process of completing tasks so that we have a set process that ensures quality.

How can I help someone else, or the entire team, to learn something new?
I have a decent understanding of our codebase so far, so if anyone has any questions about the code I could probably help.

What is my contribution towards the team's use of Scrum?
This sprint has been a bit special since we have had self-study time and time off for holidays. This means we haven't had as many meetings as we usually have. But I have contributed to the team's use of Scrum by completing my claimed tasks and being active during the sprints startup meeting.

What is my contribution towards the team's deliveries
This week or "half sprint" I have worked on splitting our adlist into different sections with their own header. This was done to get a better overview of your own posted ads, ads you have claimed and available ads.
