Individuell reflektion 1 - Henrik Tao

29/03/2019

What do I want to learn or understand better?
I want to learn from my team members, specifically members from the other programs. I realized that our team members approach problems and discussion issues differently. For example I felt that the I-students were very organised in how they approached the social contract in a structured way. That is what I want to learn.

From the puzzle and lego workshops I got an intriguing experience of how scrum works and how most of the leading companies within the technology field use it in their projects. I look forward to achieve the knowledge and experience to be able to further effectively utilize the agile method.

How can I help someone else, or the entire team, to learn something new?
I believe I can contribute to the team by helping members with git. Such as setup and how to use it.

What is my contribution towards the team's use of Scrum?
During the Lego workshop session I documented our reflections. Therefore I think I can contribute with documentation as a secretary during scrum meetings.

What is my contribution towards the team's deliveries?
In the Lego workshop I contributed with finding Lego pieces with specific requirements as in size and colour. Also I contributed with thoughts and opinions in discussions and reflections.
