What do I want to learn or understand better?
The objective of the previous sprint was to invest more time in physical meetings, which has not been very successful as we have been busy with exams, as well as having the sprint cut in half because of the break. Communication have been better, when I have worked on the project, I have first checked up on how the team members work are going, as well as communicating what I am working on and how it is progressing. We hope to further improve on this for the coming sprints.

As for the objective of learning the functionality of the database, through reading articles from the Firebase site and explanations from team members, I have learned how to query the database, as well as how adding an object or collection, and updating its values, in the database works.

How can I help someone else, or the entire team, to learn something new?

If someone in the team wants to learn how the database works, I would recommend reading the article, where it was best explained, however, I could also demonstrate some functionality while explaining, in case the article is not sufficient.

What is my contribution towards the team's use of Scrum?

My contribution towards the team's use of Scrum has mainly been suggesting ideas of improvement in the sprint retrospective for the next sprint and working on user-stories for the product backlog.

What is my contribution towards the team's deliveries?

This sprint I have been working on a user story together with a team member. We have both learned about how the database works, and have implemented ways to update values in an object in the database.
